Taking Physical Security to the **NEXT LEVEL**

The Next Generation of Security is here

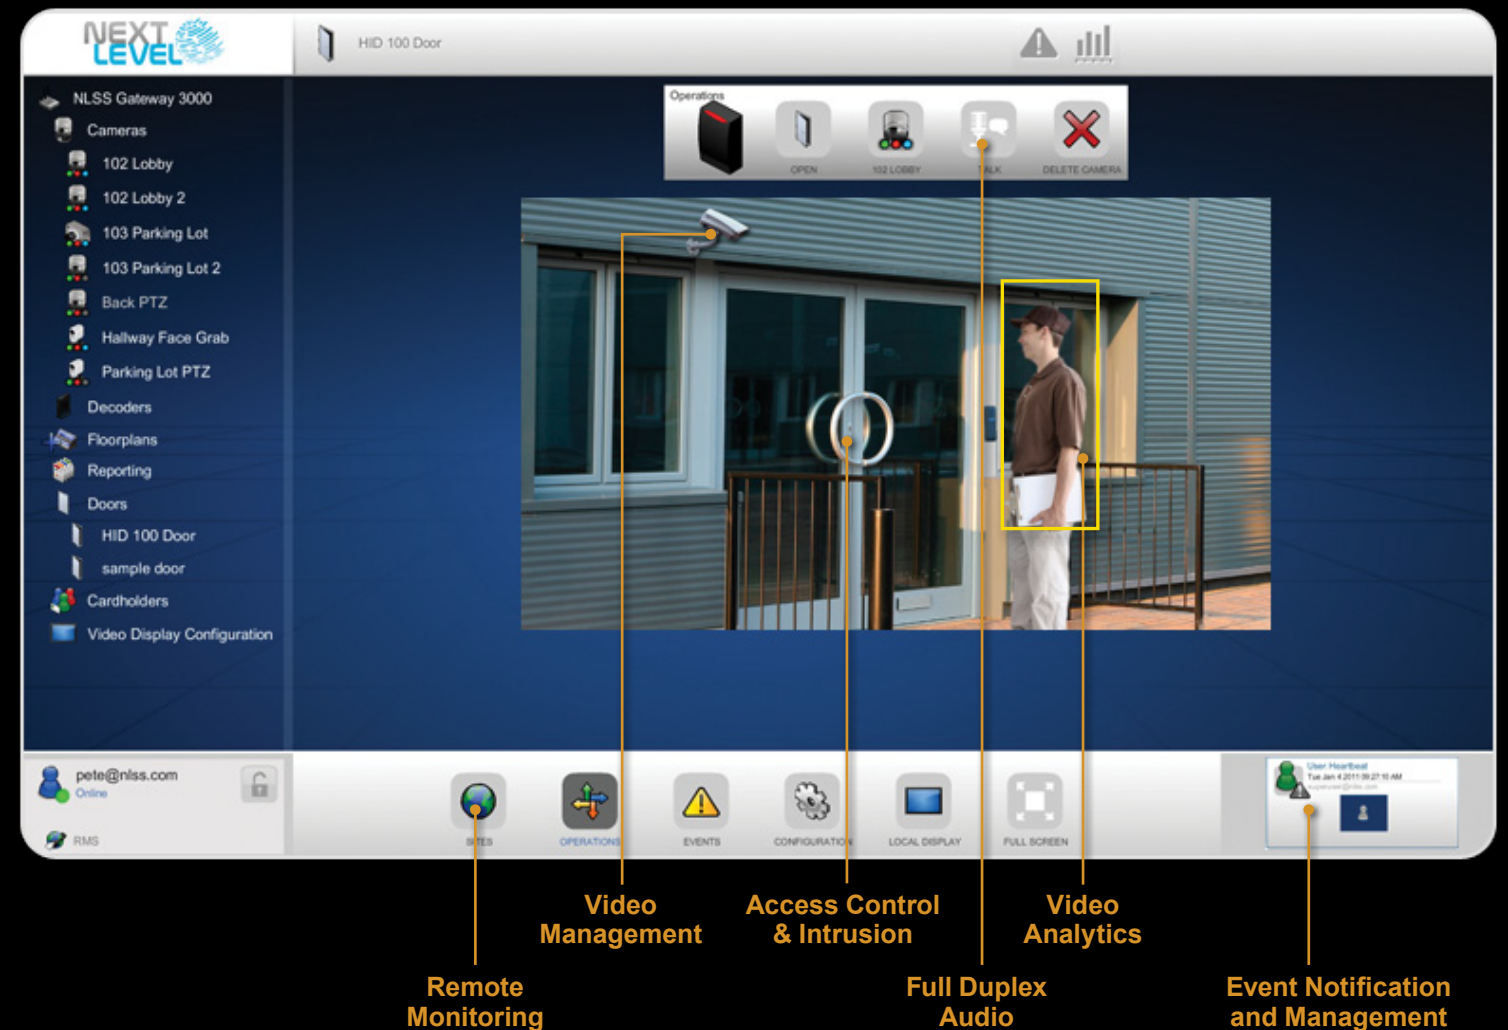

NLSS Gateway 5000

Security in the Cloud

Next Level's browser-based products combine the ingenuity of cloud computing with the sophistication of integrated security systems. With no software to install, Next Level's products work on most Web-enabled devices and are accessible from anywhere around the world.

The integrated, networked approach to security offers an unprecedented level of insight into potential risks as well as operational functions. When the data from these once separate devices is combined, the result is enhanced situational awareness.

Introducing the NLSS Gateway The Integrated **Solution**

A world of security in one package

The NLSS Gateway is a completely unique IP security solution. It combines video management, access control, video analytics and more onto a single networked platform that can be accessed from anywhere through a common Web browser. Data from these subsystems is automatically correlated into a sophisticated event management system, providing users with a comprehensive view of security operations. Events from all areas of the system including video, access, system health and more can be linked to specific actions such as email notifications. Because there is no software to install, the NLSS Gateway is a true browser-based solution that can be accessed from any Web-enabled device.

Experience a new level of sophistication at an affordable price. The NLSS Gateway supports multiple streams of digital video in various resolutions and formats, and access control panels and readers from one door to hundreds. It includes a range of intelligent video analytics and forensic analytic capabilities at no additional cost and operates on an intuitive browser-based interface similar to those found in today's consumer products. Despite its advanced feature set, the NLSS Gateway is delivered in a compact form factor at an unexpectedly affordable price with no licensing fees.

The NLSS Gateway is available in three models depending on installation requirements: The NLSS Gateway Micro, NLSS Gateway 3000 and the NLSS Gateway 5000. Please consult your local sales representative to determine which model is right for you.

Gateway Functionality

Expect more out of the box

Video Management

The core of the NLSS Gateway is its fully integrated video management system, which is networked from the ground-up with all system components to offer a comprehensive view of a facility's security operations.

- 1 PTZ control & presets
- 2 Digital PTZ
- 3 Video Analytics
- 4 Live & recorded video controls
- 5 Bookmark
- 6 Export single frame
- 7 Camera Activity Status
- 8 Stream Management
- 9 Events & Reports
- 10 Joystick & PTZ control
- 11 I/O Connection Support
- 12 Filmstrip view - updates every 30 seconds
- 13 Event type icons on timeline
- 14 Event Detail
- 15 2-way audio with camera

Event Management

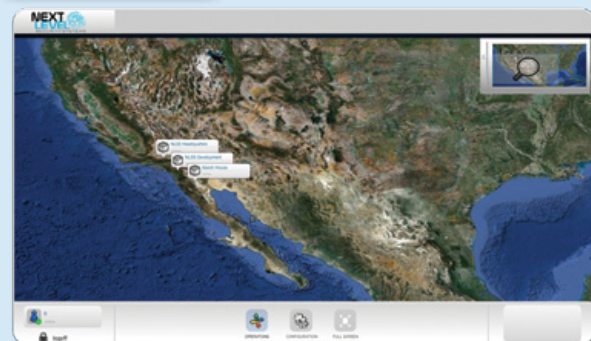

Events are streamlined into a comprehensive event management system. This advanced system includes grooming queues, status management and a range of search filters. Events can be linked to specific actions such as an email or PTZ motion for automatic event response.

- 1 Event Log, Shunt Queue, Lock Queue, Emergency Queue
- 2 Search filters
- 3 Associated video, images & realtime view of event scene
- 4 Event information & actions
- 5 Notes & note history
- 6 Export CSV file or print log
- 7 Click on event to view more information
- 8 Sort by event date, time, source, severity or type

Remote Management

With a Next Level Remote Management Services subscription, single or multiple NLSS Gateways can be accessed, configured and monitored from a single Web portal. Critical data and system configurations are securely backed up to remote servers.

NLSS Gateway 5000

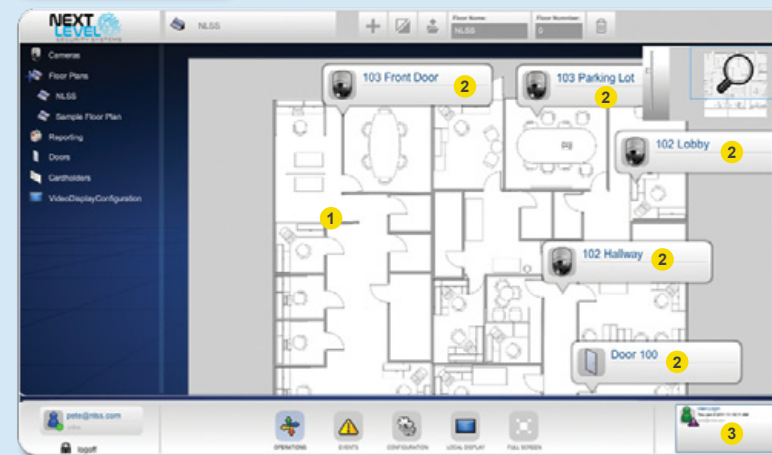

NLSS Gateway Micro

NLSS Gateway 3000

Intrusion

Video and access control work in conjunction to identify and alert against potentially harmful activity including break-ins, forced entries and tailgating.

- 1 Events pop up on floor plan to quickly locate areas of activity
- 2 Interactive floor plans are easy to build. Simply drag and drop cameras, doors, monitors, and other hardware for a comprehensive overview
- 3 Click on alert for detailed event information

The NLSS Gateway integrates sophisticated access control and cardholder database functionality into the interface.

Access Control

- 1 Lock or unlock doors remotely through a Web browser
- 2 Full duplex audio
- 3 Compare face-capture images with cardholder database to verify access events
- 4 Track cardholders with detailed event lists

Video Analytics

The NLSS Gateway includes ten built-in video analytics at no additional cost including: activity, direction, dwell time, face capture, line crossing, people count, people count directional, perimeter, object moved, object taken. Forensic analytics is also included for previously recorded video.

- 1 Overlay trip lines or boxes onto video screens to identify sensitive areas
- 2 Click on analytic alerts to view corresponding video

Ten built-in analytic metrics and forensic analytics; integrated at no additional cost

Practical Applications For Your Business

The **NLSS Gateway** provides intriguing solutions for businesses of all types and sizes. When the components of a complete security system work together, the result is optimized business operations, enhanced situational awareness and faster response times.

Securing Vulnerable Access Points

Facilities are most vulnerable at their access points. The NLSS Gateway secures these weak spots with combined video, access control and analytics. In the same browser, users can read event information from a door, view corresponding camera footage and talk to the intruder through local audio enabled cameras. IP door locks send alerts to security operators when doors have been tampered with or forced open. People counting, face capture and other built-in video analytics are useful tools for determining fraudulent activity.

Faster Response

The NLSS Gateway's automatic action response is customizable and easy to set up. Link events such as break-ins with an automatic action such as email or SMS notification. Use the advanced forensic analytics for quick investigation on recorded video. In a matter of second, a forensic analytic metric can locate a single motion event in hours of recorded video.

Centralized Management

Companies with multiple sites and facilities require mobility from their security systems. The NLSS Gateway makes day-to-day tasks efficient and more secure. Unmanned deliveries, for example, are a possibility. Security operators can view the camera footage from the loading dock, talk to the delivery person through an audio enabled camera, unlock the door to let the delivery person in and lock the door once the delivery is complete.

Improve Operations

Integrated, networked security systems not only enhance safety, they also ensure best practices are followed to increase business efficiency.

Reports generated from events offer endless insight into how a business runs.

Determine conversion rates or staffing levels with the help of video analytics tools such as people counting. Ensure employee compliance with business policies, such as appropriate time card procedures, with integrated access control and surveillance footage alerts.

The Integrated Advantage

A Comprehensive View of Security Operations

The NLSS Gateway offers more than just a peek inside your security program; it provides a comprehensive picture of your risk profile, vulnerabilities and security devices. Information is correlated from video surveillance, access control, intrusion alerts and video analytics to give users a thorough analysis of security and business operations.

Cloud-Based Security

The NLSS Gateway interface works in any Web browser, giving users the ability to access their information from any computer, tablet or smartphone. With no software to install, the NLSS Gateway offers a true cloud-based security solution.

Standards-Based

With the NLSS Gateway, there are no limitations. Its open platform incorporates specifications from PSIA and ONVIF that enable users to choose from a complete range of industry-leading IP security devices, such as cameras or encoders and door locks, that best fit specific needs.

Auto-Discovery and Configuration

System installation is made easy with built-in tools such as auto-discovery and configuration. The NLSS Gateway will automatically locate and configure surveillance cameras and other edge devices that support self-discovery protocols, reducing the need for complex networking and training.

Video View Optimization (Transcoding)

The NLSS Gateway optimizes video to best fit the user's viewing device based on the bandwidth available.

Scalable

The NLSS Gateway easily scales to fit the growing needs of your business. System configuration back-up automatically duplicates settings for easier scalability or faster replacement, avoiding costly downtimes.

Legacy Systems

The NLSS Gateway integrates with legacy access control and video surveillance systems.

Affordable Solutions

The NLSS Gateway's rich functionality is available at an all inclusive price that is installed at once and operates over a single user interface. In addition, it requires no licensing fees or proprietary cabling because it operates over existing network infrastructures.

Low Energy Consumption

The NLSS Gateway replaces large, high-energy consumption servers and racks. By contrast, NLSS Gateways take up very little physical space and consume extremely low levels of power. The NLSS Gateway Micro meets the EuP standard.

Remote Management

Value Added Services

With the NLSS Gateway, service providers have an opportunity to offer value added service to their customers. A Next Level Remote Management Services (RMS) subscription enables users to monitor, access and configure all features of their system from anywhere and at anytime. Whether managing several sites from a single location or investigating an incident from a satellite office, the Remote Management package offers the benefits of mobility with an intuitive browser-based interface.

- Remote access to live and recorded video
- Access data and interface with IP-security devices
- Full duplex audio
- Remote software updates
- Mobile device support
- Automatic database configuration backup and replication
- Unlimited live viewing
- No single point of failure
- Advanced hardware replacement

NEXT LEVEL SECURITY SYSTEMS

A New World of Networked Security

Next Level Security Systems is a physical security company focused on developing a new breed of networked security solutions. Next Level's products combine the performance, sophistication and functionality of enterprise-class security systems into a compact, unified and affordable solution.

Led by a team of seasoned security executives and world-class engineers, Next Level was built around the core belief that exceptional performance and advanced technology should be both easy to use and affordable. The Next Level team's mission is to develop advanced yet intuitive hardware and software products that set new standards in performance vs. cost.
