

AXIS Video Hosting System (AVHS)

Video monitoring as an Internet service.

Expand your current business with video monitoring as a managed Internet service

Axis' wide range of network cameras and the unique AXIS Video Hosting System (AVHS) software are key components to create a service provider-specific portal to manage video monitoring over the Internet. This solution allows security companies, alarm operators and Internet service providers to establish a recurring revenue stream. By adding Internet-based video surveillance to your service offering you will establish closer relations with existing customers and at the same time, broaden your potential customer base – an opportunity to gain a competitive advantage.

An opportunity to develop your service offering

AVHS scales with minimal effort and is particularly cost-effective when offering monitoring to dispersed installations with a few cameras at each site. The system provides many benefits, giving you new possibilities to develop your business:

- > Adds value to security services and Internet services by offering remote monitoring of stores, small and mid-sized businesses, and residences
- > Increases alarm operation efficiency with remote verification and alarm reset
- > Provides easy management of your customers' security concerns at any time
- > Provides a flexible solution for temporary and mobile surveillance
- > Prevents damage on property and thereby minimizes insurance claims
- > Offers low installation cost - connects to existing broadband network
- > Requires minimal maintenance

Scalability with minimal maintenance

The system is designed to cater for thousands of users. The number of users and cameras is limited only by the server capacity. On-site maintenance is usually not required since updates, error handling and management are centralized. The AVHS server software allows you to control which camera settings can be changed by the end user.

Peace of mind for the end user

An Internet-based video monitoring system offers an easy and effective way to manage your customers' security concerns while at work, at home or on the road. The users can connect to your service portal and watch live or recorded video using a computer as well as most modern cell phones.

Most Axis network video products are suitable for AVHS system setup.

The user interface can be customized to meet your company's profile.

Flexible Internet access to the video service portal via PC, laptop or mobile phone.

Easy to install

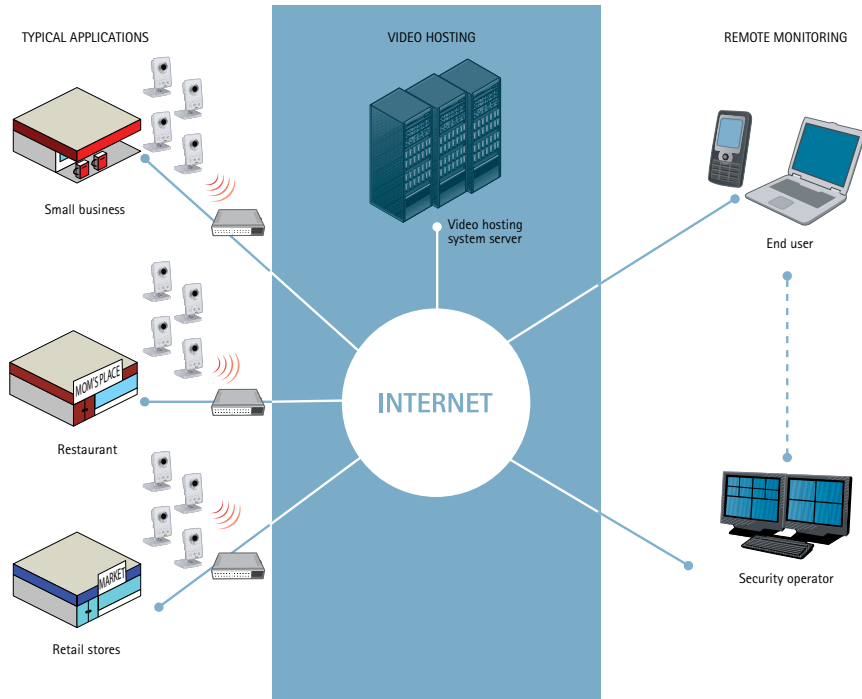

The installation of Axis network cameras to the video hosting system requires no detailed knowledge of the customer's network. No configuration of the router is needed. The unique One-Click Camera Connection feature makes it easy to add cameras to the system regardless of the Internet service provider, routers

and firewall settings. Simply connect the configuration-free cameras to the existing network and register the cameras to the service portal and they are immediately available for viewing and recording over the Internet.

Guiding you to become a video service provider

It is easy to benefit from AXIS Video Hosting System. Based on your specific requirements we can recommend an Axis qualified video hosting provider who can guide you in the process of setting up your own Internet-based service portal. This gives you the possibility to focus on your business.

The hosting provider customizes the portal interface to meet the graphic identity of your company. They provide storage of customer video, and run the day-to-day management and maintenance. If you have the capability, and if it fits your current business, you always have the possibility to manage and maintain the video hosting system by yourself.

Connect the cameras to the local network and register the cameras to the service portal and they are available for immediate viewing and recording over the Internet.

By customizing of the AVHS software, the hosting provider develops your service portal according to your requirements and your graphic identity.

The end user can watch live and recorded video from any location by logging in to your video service portal. The customer may also approve alarm operator access to the video material, allowing qualified staff to take the necessary actions.

About Axis Communications

Axis is an IT company offering network video solutions for professional installations. The company is the global market leader in network video, driving the ongoing shift from analog to digital video surveillance. Axis products and solutions focus on security surveillance and remote monitoring, and are based on innovative, open technology platforms.
