Key features
at a glance

▶ Easy control, customization and expansion of any-sized IP CCTV network using VIDOS Server and VIDOS Configuration Manager

▶ Sophisticated remote control and video switching from management and control systems thanks to VIDOS Automation Interface

▶ User-friendly interface of core VIDOS application with drag-and-drop site-map support, IntuiKey, dockable windows, alarm/event management and scripting support

▶ VIDOS Monitor Wall can be used on any powerful VIDOS client PC to replace multiple monitors — up to 50 video windows on a dual monitor PC

▶ Small client — VIDOS Lite Viewer — allows remote viewing and monitoring

▶ VIDOS Archive Player and Exporter replays recordings from local PCs, video encoders with local storage, and NVRs. Search functionality is based on calendars and it can export recordings to file systems or burn directly to CD.

VIDOS Lite

Tradition of quality and innovation
For over 100 years, the Bosch name has stood for quality and reliability. Bosch Security Systems proudly offers a wide range of fire, intrusion, social alarm, CCTV, management and communication systems and components to help you find the solution for any application. We are the global supplier of choice for innovative technology backed by the highest level of service and support. When you need solutions you can rely on, choose Bosch.

VIDOS Pro Suite
Smooth migration to digital IP networks

BOSCH
Invented for life

VIDOS Pro Suite
## Smooth migration to digital IP networks

Scalable software for client/server CCTV surveillance systems
For managing or enhancing CCTV surveillance systems with IP technology, the VIDOS Professional Video Management Software Suite (VIDOS Pro Suite) offers a uniquely comprehensive and flexible solution. Comprising a range of software modules for CCTV systems of any size, you get exactly the tools and components you need to manage your IP network video application. What's more, VIDOS Pro Suite makes system expansion and reconfiguration simple. Built on proven VIDOS workstation software with its friendly site-map based graphical interface, VIDOS has been greatly enhanced. The Pro Suite offers client/server operation, and a host of new tools and improvements based on practical user feedback.
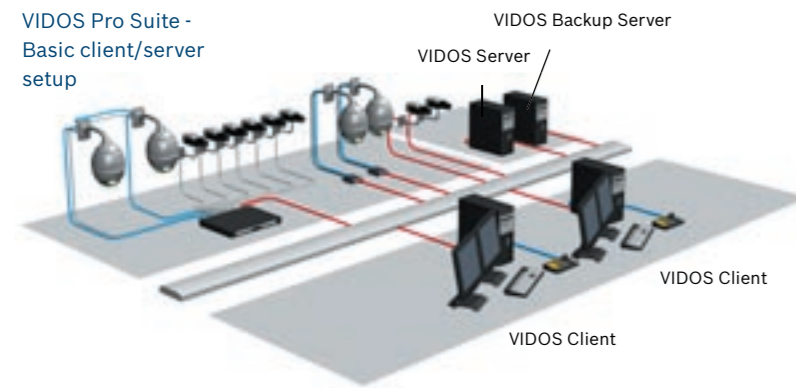

Just what you need
VIDOS has evolved into a fantastic video management system that smoothes the transition from analog and hybrid systems to modern IP CCTV networks. VIDOS Pro Suite further raises the bar by bringing scalability and flexibility — thanks to client/server operation and a bundle of new features in software modules. VIDOS Pro Suite makes networks easy to customize, enabling everything from incredibly small systems using VIDOS Lite right up to very large, multi-user systems, where priorities, central/remote management, administration and configuration can be instantly set up and modified using the new VIDOS Configuration Manager. In short, VIDOS Pro Suite is the perfect match to your feature and network requirements. Moreover, it has the advantage of being able to work with conventional hardware, such as analog cameras and monitors, or Bosch's IntuiKey keyboard/joystick already familiar to experienced CCTV operators.
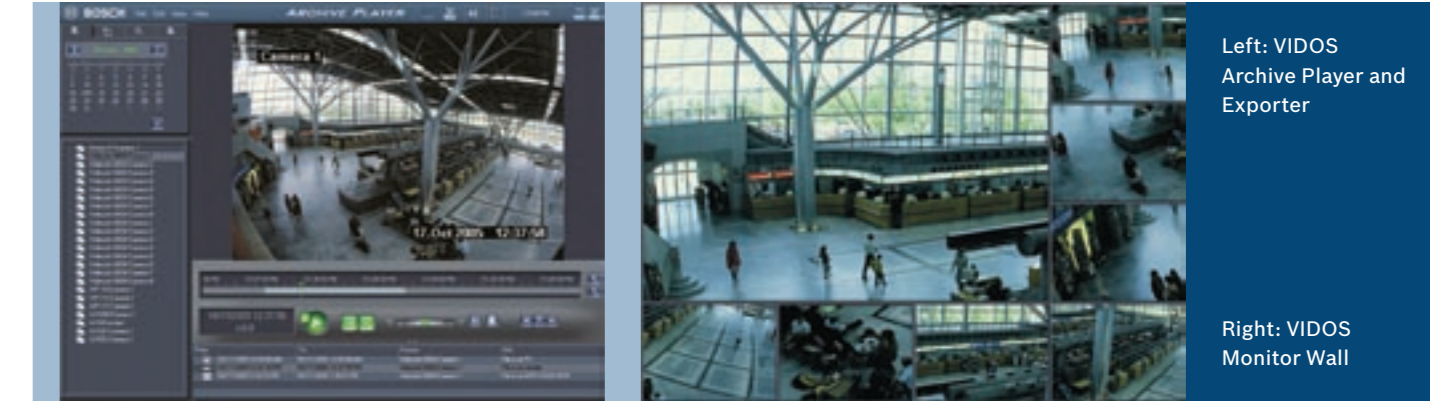

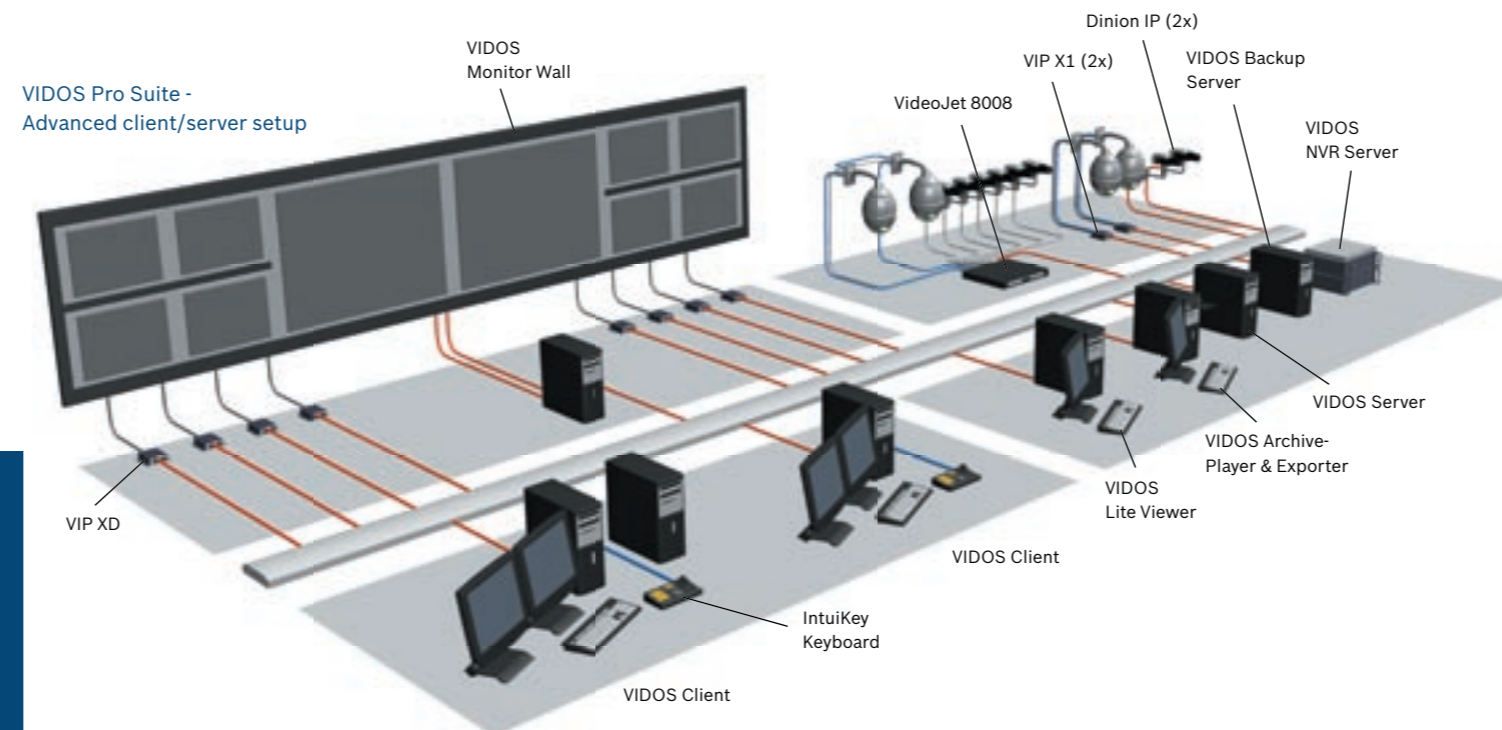

Fast and flexible system integration
VIDOS Pro Suite offers system integrators incredible freedom to customize networks to exactly what the end user or the application requires. Administrators have the Configuration Manager – a powerful generic configuration tool for all other modules. Specific privileges for cameras e.g. pan/tilt/zoom, and priorities for one operator over another are easy to set. Adding hardware components such as NVRs or new clients is also easy. With VIDOS Pro Suite, the cost and effort is negligible because everything is configured quickly and centrally at servers — no time-consuming mass installations on individual workstations. VIDOS Automation Interface for external control center servers allows control from anywhere by integrating the open scripting language into for example building integration projects. The Software Developer's Kit (SDK) and enhanced export functions further ensure compatibility and enable advanced multi-user, multi-level, multi-station IP CCTV systems.

A new view on virtual monitors
Today, many customers want to use large flat-panel monitors or projection TVs in a control room to display multiple screens. Up till now, 4 images per monitor has been the norm. Now, with VIDOS Pro Suite's powerful Monitor Wall decoder and display application, banks of conventional CRT monitors can be replaced with a single, easily-managed display. VIDOS Monitor Wall offers a flexible display area where the number and quality of images is only limited by the power of the PC — so this will grow with PC processor performance. With a powerful dual-monitor computer, up to 50 video windows could be displayed, many of them in full D1 resolution and at full frame-rate. Furthermore, it's relatively easy to change the layout of the Monitor Wall. So in an emergency, for example, an alarm scenario could bring up a totally different layout viewing 6 cameras as 1 large and 5 small screens.

The choice is yours
VIDOS Pro Suite comes in multiple language versions on CD. 30-day trials are available of all licensable software. The basic packages, predefined for ease of use, comprise VIDOS, VIDOS Server, VIDOS Lite and VIDOS Monitor Wall, though there are a huge range of user-defined options for the number of cameras, channels, stand-alone or multiple workstations, servers etc. Tailored to your needs, VIDOS Pro Suite offers outstanding performance and value for money.
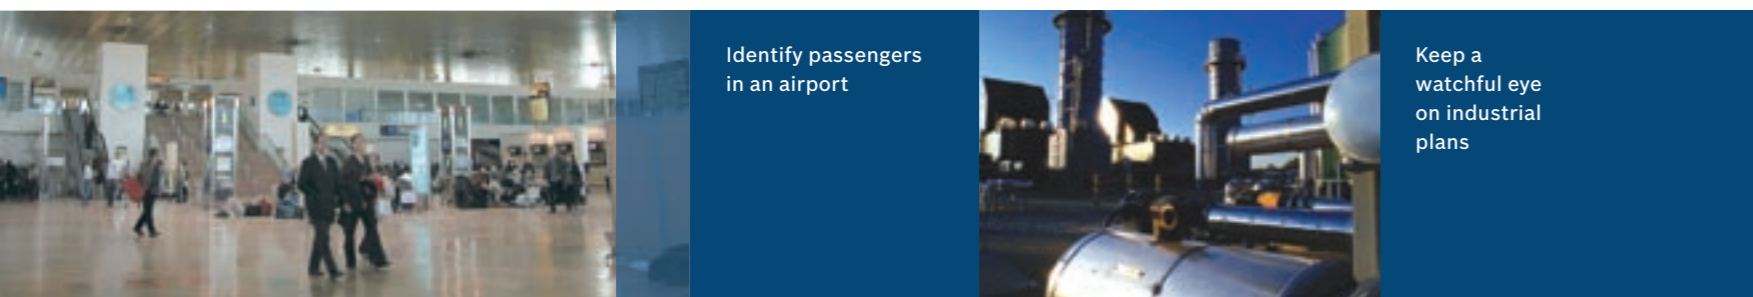

The IP advantage
IP-based CCTV surveillance systems are increasingly being deployed throughout the world by many businesses, institutions and organizations. Compared with previous systems, IP networks offer inherent advantages of scalability, flexibility, optimal camera functionality, wide area connectivity and an attractive cost of ownership — compelling arguments for new and existing users to invest in IP-based security systems.

Why Bosch?
Bosch Security Systems is a pioneer and world leader in IP network video for surveillance systems. Our products are compatible with analog components in legacy networks, so you can make the transition to IP gradually without losing original functionality. And if you're a new user, Bosch offers an enormous advantage with truly state-of-the-art surveillance technology and software — a sound investment for the future.
