

# ◆ XProtect Enterprise

Efficient video surveillance for medium and large installations

XProtect Enterprise is video surveillance for medium, multi-site installations. With support for a wide array of sophisticated features XProtect Enterprise is ideal for users who need to quickly respond to incidents and safeguard video evidence. XProtect Enterprise offers a comprehensive overview of the entire surveillance installation, allowing for quick detection of high-risk areas and exceptional situational awareness.

## ◆ Incident detection

Interactive and multi-layered maps provide a comprehensive overview of cameras and layouts allowing for quick detection of trouble areas.

Using the Camera Navigator, users can easily track moving objects even in geographically complex security locations.

## ◆ Safeguard video evidence

Unique capabilities ensure the integrity and availability of critical video evidence.

## ◆ Detect motion instantly

Includes a wide range of capabilities which ensure high performance and reliability, including built-in motion detection.

## Harbors

XProtect software helps improve harbor control by monitoring ferry transport, traffic coordination, ticket sales and travel planning, occurring in the harbor terminals and on the ships.

## What's new in 2014

### Simple upgrade

New licensing flow significantly reduces steps and time involved when upgrading to a more advanced Milestone solution and when updating the VMS to the latest version available.

### Easy to deploy

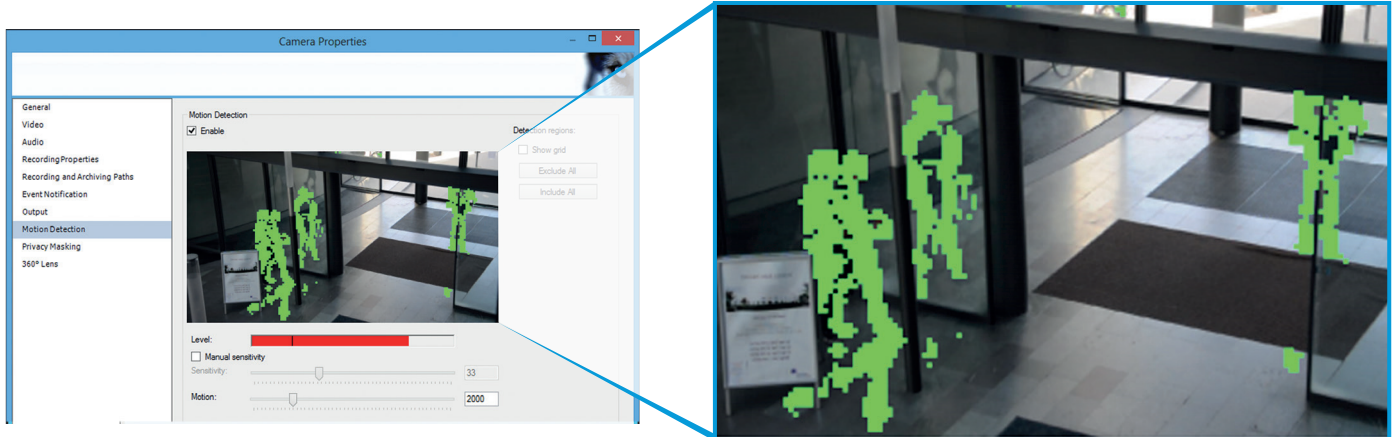

All XProtect Professional VMS Products use the same installer, which simplifies the deployment process.

### Update notifications

Users are automatically notified about new software versions, ensuring they are always aware of the latest product updates, capabilities and bug fixes.

### Automatic motion detection adjustment

Adjusts the sensitivity level to optimize motion detection for background noise levels in the video stream.

### Did you know?

Milestone Customer Dashboard is an online monitoring service that enables resellers to maintain real-time system status of their customers' installations and keep track of technical incidents in the installation. Resellers can then proactively solve issues before they become a problem to the user.
