Printing Evidence in the Milestone XProtect Smart Client

With the Smart Client you are able to quickly print images to be used as evidence.

When you print an image, it is automatically included in a small surveillance report, in which you are also able to include notes about the recorded incident.

Note: Depending on your user rights, access to printing evidence may be restricted.

To print an image for use as evidence, do the following:

1. Select the Smart Client's Browse tab.

2. In the Browse tab’s Views section, select a view which contains images from the required camera.

3. Use the Browse tab’s Time Navigation section to navigate to the image you want to print.

4. If the view contains images from more than one camera, make sure the required camera is selected in the view.

   If in doubt, simply double-click the required image: this will enlarge the image and automatically select the camera at the same time.

5. Now go to the Browse tab’s Print section, and click the Print button.
6. This will open the *Smart Client Surveillance Report* window with a preview of the image to be printed as well as information about camera name, image capture time, print time and user name of the user printing the image.

   You will be able to include a user’s note, for example a description of the recorded incident.

   **Optional:** If you want to select a particular printer, or change paper size, source or orientation for the printout, click the surveillance report window’s *Page Setup* button.

   **Optional:** If you want to preview your printout, click the surveillance report window's *Preview* button.

7. When ready, click the *Print* button to print the image and associated details.
