

A new look at
Bank Security

A new look at Bank Security

A new look at bank security

What if you could use your existing CCTV equipment and network infrastructure to create a modern, state-of-the-art surveillance system? One that enables you to monitor activities at any number of branch offices from a central location? One which is sophisticated enough to visually verify alarms to your security staff, yet simple enough for bank staff to install and maintain without receiving special training?

With an Axis network video solution all this is possible.

Systems that are convenient and easily integrated

Axis provides you with cost-effective network video solutions that are easy to use and offer all the functionality and reliability needed to protect staff and assets, verify the bank's transactions and prevent time being wasted on attending to false alarms.

Our products allow you to use your existing network infrastructure to deploy cameras, making for short implementation time and low start up costs. Once up and running, the administration of a network video system is both simpler and less labor intensive than traditional CCTV since images are stored on computer hard discs, and employees do not have to change and take care of videotapes.

Solutions installed in local bank branches can transmit images to a central location for remote viewing using the LAN or Internet, which is extremely convenient for any organization with geographically dispersed local branches. And if your business is expanding, rest assured that an Axis system scales easily; it can consist of any number of cameras and can be expanded simply by adding one camera at a time.

Which means that, no matter whether you are looking for a new core surveillance solution or a complement to your existing one, an Axis network video solution will fit the bill.

All the functionality needed for maximum reliability

The reliability of network video reduces the risk that thieves will get away with their crimes, and this includes internal crimes such as employee fraud. High image quality leads to easy identification of people and a clear view of transactions at ATM machines, deposit boxes and at the cashier in the branch office.

Knowing that all incidents will be observed is both a deterrent to would-be criminals and gives bank personnel peace of mind so they can get on with their jobs, whilst also leaving customers free to go about their business.

Network cameras with motion detection can be used to send images by e-mail or MMS to security personnel or the police if a break-in should occur. This eliminates the time and effort wasted in responding to false alarms and enables decisions to be based on accurate, up-to-the minute information. And in addition to improving safety, you can use video images to evaluate peak hours of activity at each bank branch leading to better use of tellers through optimum scheduling.

Tried and tested

Over the last 5 years, Axis surveillance solutions have been installed in banks and financial institutions in several major European countries, in the US and in Asia. With Axis' proven track record, you can feel confident that we will create the right solution and have the right products to achieve your bank surveillance ambitions whatever they may be.

Reliable systems for bank surveillance and security

Reasons to choose Axis network video

- Remote access to video from any number of branch offices from a single location to protect staff and assets, verify transactions and cut down on false alarms
- Use existing network infrastructure and CCTV equipment for low start-up and operating costs
- Flexible and scalable solutions based on open standards – that meet your specific needs
- Proven future-proof technology – securing your investment

About Axis

Axis increases the value of network solutions. The company is an innovative market leader in network video and print servers. Axis' products and solutions are focused on applications such as security surveillance, remote monitoring and document management. The products are based on in-house developed chip technology, which is also sold to third parties.

Axis was founded in 1984 and is listed on the Stockholmsbörsen (XSSE:AXIS). Axis operates globally with offices in 14 countries and in cooperation with distributors, system integrators and OEM partners in 70 countries. Markets outside Sweden account for more than 95% of sales. Information about Axis can be found at www.axis.com
